by seat belt.

Easy-to-fold chair
saves space.

Easy-to-use
footrest handle.

Also deliverable
with a vertical stop,
**to save space
at the bottom of
the stairs.**

A smooth ride

Whether you're going up or down, you'll always experience a very smooth and safe ride with the Flow stairlift. Thanks to the proven monorail concept and patented Advanced Swivel and Levelling (ASL) Technology, the chair and footrest rotate to the most optimal and safe position during the ride. This saves your time and allows you to easily handle the smallest and steepest stairs, while sitting comfortably in your chair. You can get off safely, because the chair is already in the right place upon arrival. ThyssenKrupp Access is the only chairlift manufacturer on the market that offers this advanced ASL Technology. With the ergonomically-positioned footrest you'll experience less knee flexion, adding extra comfort to your ride. And, when you've parked the Flow, it occupies only a small part of the stairs, so your loved ones can easily walk up or down without being obstructed in the corridor or hallway.

Specifications & options
